K. ADDITIONAL PHYSICIAN TO BE COPIED

Name	Email / Fax	Office / Practice / Facility Name

PATIENT CONSENT**Patient Consent to Genetic Testing**

Your doctor has ordered genomic sequencing tests (the "xT Test" or the "xF Test") and/or genetic testing (the "xG Test") to obtain additional information that may inform medical management of your cancer or general health. The xT, xF, and xG Tests may provide certain hereditary information about you and your family. You are not required to receive this hereditary (or "germline") information, although it may assist your physician in determining an appropriate course of treatment. This document describes the potential risks, benefits, and limitations of the Tests. By signing below, you are providing consent to run a genetic test that may result in you receiving hereditary or germline results separate and apart from information about your cancer. If you have any questions or need additional information, please consult your doctor before signing.

Purpose & Process

Tempus will perform Next Generation Sequencing ("NGS") and analysis of certain regions of your DNA (and for the xT Test, your RNA) that may be associated with your cancer. In addition, if your doctor has ordered the xG Test, GeneDx, a laboratory with whom Tempus has contracted, will perform hereditary genetic testing based on a blood sample. Tempus will report Test results to your doctor. The goal of the Tests is to identify key characteristics of your cancer that may inform clinical decision making. Tempus will work with your doctor to obtain tumor samples, normal samples (saliva or blood), and information from your electronic health record. Genetic material, including DNA (and for the xT Test, RNA), will be obtained from samples, stored, and analyzed. Tempus will compare DNA sequencing results obtained from the tumor cells with those obtained from your normal cells. In order to improve the quality of our testing, Tempus may retain your tissue, cells and/or DNA or RNA extracted from your cells for an indefinite period of time following the testing ordered by your doctor. Tempus may use leftover materials for internal purposes, including quality assurance and test validation. Tempus may also remove personally identifying information from these materials in accordance with applicable law and use it for de-identified research purposes, including future research related to cancer diagnosis, testing, and therapies.

Performing Tests on your normal (non-tumor) tissue, including the xG Test, may reveal certain personal health information about you or information about your genetic profile that is unrelated to your cancer diagnosis, such as hereditary information, additional diagnoses, or changes in your condition ("incidental findings"). The Test Reports will include information about incidental findings. In each case where incidental findings are reported, you may learn medical information about yourself (or your family) that you did not expect. You may want to discuss this information with your physician or a genetic counselor. If you want to talk to a genetic counselor, you can ask your doctor to refer you to one, or you can find contact information on the Test Report that Tempus will make available to you or your doctor. These incidental findings may be important to determining an appropriate course of treatment; however, you are not required to receive them. Your signature below indicates that you have read, understood, and agree to receive incidental findings related to the Tests ordered by your physician.

Risks, Benefits, & Limitations

The Test reports do not provide any medical diagnosis and do not make any specific treatment recommendations; instead they provide information for your doctor to review. There is no guarantee that performance of a Test will yield clinically relevant information, inform your doctor's clinical decision-making, or otherwise lead to any particular or beneficial outcome for you.

Test results may show one or more "actionable" genomic alterations, meaning that there may be FDA-approved therapies available that target a specific type of cancer, certain clinical trials may be available to you, or genetic information may impact your ongoing healthcare management. Knowledge about these facts and the meaning of genetic changes is constantly changing. The Tests do not examine every possible genetic variant that may exist, and the technology also may not identify all variants related to you or your cancer, because there is a possibility of testing errors and because some biological factors may limit the accuracy of results.

Tempus is under no ongoing obligation to update, revisit or later re-evaluate the results of the Tests after those results have been made available to your doctor through the test reports described above.

Assignment of Insurance Benefits; Authorization; Appointment as Legal Representative

By signing below, you hereby assign all applicable health insurance benefits and/or insurance reimbursement you have under your health plan(s) to Tempus Labs, Inc. ("Tempus") for services performed by Tempus. You also appoint Tempus as your authorized representative and convey to Tempus, to the full extent permissible under the law, the power to: (1) file medical claims with the health plan; (2) file appeals and grievances with the health plan and/or any agency or governmental body with applicable authority; (3) obtain and release, medical records and insurance information as necessary to process a claim, appeal or grievance; and (4) collect payment of any and all medical benefits and insurance proceeds (including Medicare and Medicaid). The above appointment and conveyance includes all of your rights in connection with any claim, right, or cause of action including litigation against your health plan that you may have, including, the right to claim on your behalf, all such benefits, claims, or reimbursement, and to seek any other applicable remedy, including fines.

Specimen Release

By signing below, you authorize the release of your original pathology slides/blocks/clinical specimens and other materials, including extracted DNA and RNA, that are requested by Tempus ("Materials"), and hereby direct the pathology lab receiving this request to release and provide all such Materials to Tempus. You understand that the Materials may be irreplaceable and could be lost or damaged in handling, transit or when used. You agree to release Tempus and any pathology laboratory releasing such Materials from any claims you may have for any such loss or damage to the Materials.

CONSENT TO TEST
