

## Payment Options for the Tempus Genetic Test

### SELF-PAY\*

- 1 Upon order submission, your provider indicates that you would like to utilize the \$295 self-pay option.
- 2 Once the order is submitted, you will receive a link to pay for the test online, or may go directly to [payment.securetempus.com](https://payment.securetempus.com) to complete steps for self-pay. Payment may also be made over the phone by calling Customer Success at **312-598-9961**. Please note that we are unable to give results to your provider until we have received payment for the test.

\*Patients with government insurance (Original Medicare or Medicaid) are not eligible for the self-pay price of \$295.

### MEDICARE AND MEDICAID

- 1 Upon order submission, your provider indicates that you would like to use insurance to pay for the test. Your provider submits insurance with the test or Customer Success will reach out to you to obtain insurance information.
- 2 Qualifying patients with Medicare Part B (Medicare administered by the federal government for outpatient services) have no out-of-pocket costs. Patients with other forms of government insurance (i.e. Medicaid, Tricare) typically have no out-of-pocket costs.

### PRIVATE INSURANCE

- 1 Upon order submission, your provider indicates that you would like to use insurance to pay for the test. Your provider submits insurance with the test or Customer Success may reach out to you to obtain insurance information.
- 2 Tempus accepts all insurance plans and will perform a benefit check if you choose to use your insurance.
- 3 Our Customer Success team will contact you if you are expected to owe more than \$295 out-of-pocket to discuss payment options before proceeding with the test.
- 4 If insurance is used, Tempus will bill your insurance directly. Insurance patients may receive an Explanation of Benefits (EOB) from their insurance company. **This is not a bill**; it shows the specific Tempus test that was billed and what insurance covered.

The Tempus test must be ordered by a licensed healthcare provider. It cannot predict treatment response and should only be considered by a licensed healthcare provider in the context of a professional medical evaluation, taking into account the patient's full clinical history. Some medications listed in the reference materials that accompany the test results have gene-drug interaction data available in the labeling for FDA approved drugs, while other medications will be classified based on other scientific sources (such as CPIC guidelines and primary literature). **Patients should review the test results and reference information with their treating healthcare providers. Medications or dosing should not be changed outside of the direction and monitoring of a licensed provider, or changed solely based on the test results or reference information.**
