

Accelerate Trial Enrollment with the TIME Trial® Program

Sermonix, a precision medicine-focused women's oncology biopharmaceutical company, partnered with Tempus to accelerate clinical trial enrollment for the ELAINE II Phase 2 clinical trial assessing investigational lasofoxifene combination with a CDK4/6 inhibitor in patients with advanced breast cancer and an ESR1 mutation.

Tempus played the critical role to identify potentially eligible patients in real time, activate the local sites for Sermonix's clinical trial, and enable patient enrollment.

Tempus used its sequencing results and EMR integrations from its network of sites to identify potentially eligible patients based on the trial exclusion and inclusion criteria. Over 150 potentially eligible patients were identified in the first year.

Tempus activated sites in an average of 10 days, allowing patients to enroll in the trial with fewer travel and logistics concerns. In total, 50% of the trial patients came through the Tempus TIME Trial Network, and Sermonix completed enrollment in 8 months. The Tempus team included Alliance Management working in close collaboration with our Outsights team.

THE TIME TRIAL PROGRAM IN ACTION: Accelerating Success for Sermonix

- ✓ **Decreased time to enroll sites** with our Just-In-Time activation of ~10 days
- ✓ **Access to an active system of oncology providers and patients** for identification of ESR1 mutation patients through multiple panel options
- ✓ **Increased enrollment potential for patients** with Tempus reviewing inclusion/exclusion criteria for each patient
- ✓ **Patient activation when they are ready for trial** with the Tempus patient watchlist, helping clinicians and patients find trial options when they need them

50%

of the trial was consented through the TIME Trial Network

8

months to complete enrollment

150+

potentially eligible patients identified by Tempus

5

TIME sites activated in 1 month before the CRO was able to activate their first academic site
